

Freddy Cleaner

Lot ID	BID 627
Model	FREDDY 3 EB
Year of Manufacture	2009
Serial	1789
Location	Warehouse Clearance
Weight (kgs)	462
External Dimensions (WxDxH mm)	940 x 1500 x 1230

Description

Freddie Ride on Sweeper

The Freddie ride-on sweeper is a motorised industrial cleaning machine designed for fast debris collection and dust control across large indoor or outdoor floor surfaces.

Unlike a standard walk-behind vacuum, the operator sits comfortably on an ergonomic seat and navigates via a steering wheel and simple dashboard foot pedals or levers.

The Mechanical Sweeping action is achieved by a Rotating side broom which sweeps dirt, rubbish, and debris into the main path of a heavy-duty cylindrical roller brush.

High-volume vacuum fans pull in light dust and fine particles created during sweeping, passing the dirty air through a high-performance filtration system.

The dust and debris are deposited into an integrated hopper located at the rear, while cleaner air is filtered back out into the environment.
