

## Canning Heavy Duty Centrifugal Dryer

Stock No  
Manufacturer

[VF2239](#)  
[Canning](#)

### Description

Canning industrial heated spin dryer save time and money in drying small items after plating, cleaning, barreling and other similar wet processes.

The traditionally built machines include a heavy cast iron base and running gear which withstands any out of balance forces when the basket is initially loaded. The body and lid are constructed of rolled steel sections.

The galvanised basket is perforated with holes allowing small items such as nails and pins to be processed without loss.

### The barrels have the following advantages:

- Eliminates the use of absorbent materials.
- Removable basket for ease of loading and unloading.
- Electrical heating elements mounted in a side box to avoid contact with parts and moisture, with the air recirculation being created by the basket base integral fan design.

**Photographs taken prior refurbishment. Our refurbishment service is not available on all machines.**
